In re Appln. of RATLEDGE et al. Application No. 10/030,700

## SPECIFICATION AMENDMENTS

Replace the paragraph beginning at page 1, line 11 with:

According to a first an aspect of the invention there is provided, a method of culturing a microorganism for the synthesis of producing an oil including docosahexaenoic acid (DHA) by the microorganism, comprising the microorganism with an organic species comprising an acidic group or an ionized form of an acidic group, the microorganism using the species as a with a strain of Crypthecodinium cohnii comprises culturing a strain of Crypthecodinium cohnii in a nutrient medium containing acetic acid and/or acetate ions, wherein the culturing process parameters are controlled in a manner that results in the absence of a stationary phase during the culturing process. The acetic acid and/or acetate ions comprise the primary carbon source and synthesizing docosahenaenoic acid consumed by the Crypthecodinium cohnii to synthesize the DHA. The method also includes recovering oil incuding DHA from the strain of Crypthecodinium cohnii.

Replace the paragraph beginning at page 2, line 5with:

According to a second aspect of the invention there is provided an method of culturing a microorganism for the synthesis of docosahexaenoic acid by the microorganism, comprising may comprise culturing the microorganism with an organic species comprising an acidic group or an ionized form of an acidic group, the microorganism synthesizing docosahexaenoic acid containing carbon from the species.

Replace the paragraph beginning at page 2 line 10 with:

According to the third aspect of the invention there is provided a method of culturing a microorganism for the synthesis of a polyunsaturated fatty acid by the microorganism comprising may comprise culturing C. cohnii with an organic species comprising an acidic group or an ionized form of an acidic group, the C. Cohnii using the species as a carbon source and synthesizing a polyunsaturated fatty acid.
